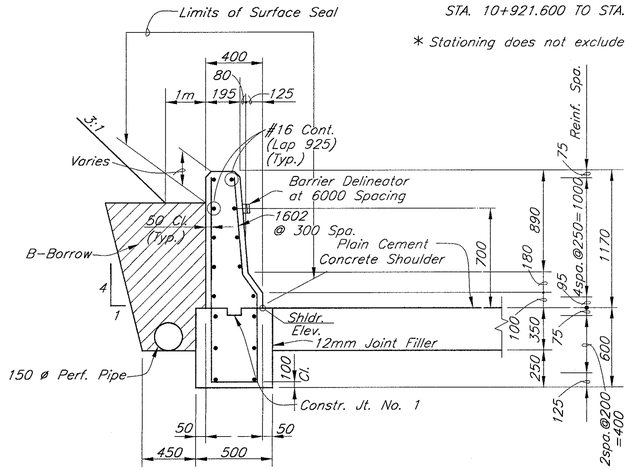
SPECIAL CONCRETE BARRIER WALL AT MEDIAN

Not to Scale

* STA. 8+493 TO STA. 9+302 "A"
STA. 10+161 TO STA. 10+483 "A" RT.
STA. 10+156 TO STA. 10+534 "A" LT.
STA. 10+921.600 TO STA. 11+040.373 "A" LT.

* Stationing does not exclude Bridge Limits

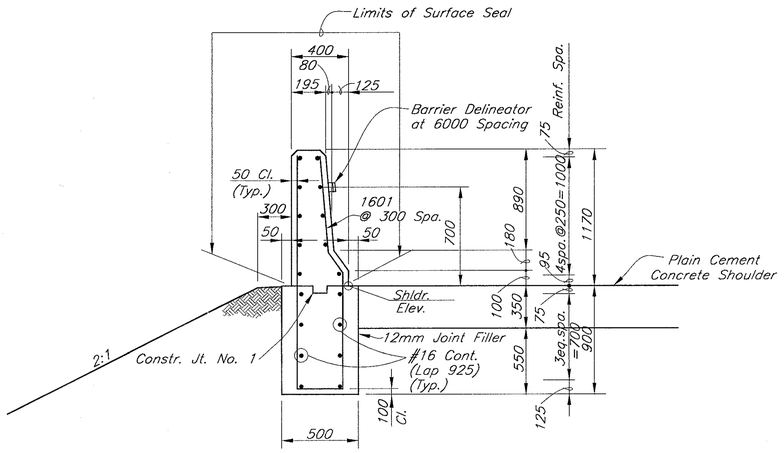
⊛ 1301 & 1302 Bars are Provided to Aid Construction for Slip-forming Special Conc. Barrier Wall. Spacing Shall be Determined in the Field.



RETAINING WALL @ SHOULDER – CUT SECTION

Not to Scale

STA. 11+213.5 "A" LT. TO STA. 11+344.5 "A" LT.
STA. 11+398.5 "A" LT. TO STA. 11+425 "A" LT.
STA. 11+133 "A" RT. TO STA. 11+327.5 "A" RT.



BARRIER RAIL @ SHOULDER – FILL SECTION

Not to Scale

STA. 11+ 425 "A" Lt. TO STA. 12+040 "A" LT.
STA. 11+383 "A" Rt. TO STA. 11+675 "A" RT.

GENERAL NOTES

All Reinforcing Steel shall be Epoxy Coated.

Concrete shall be Class A.

Chamfer exposed corners of concrete 25 mm unless noted.

Vertical expansion and construction joints shall be spaced at 120000 mm and 12500 mm (maximum) respectively, in the barrier stem only.

Continuous concrete pours shall be required between construction joints, unless otherwise approved by the Engineer.

Waterproof Expansion Joints in Accordance with Art. 702.23 for Special Concrete Barrier Wall at Median and Retaining Wall at Shoulder. In lieu of Art. 702.23, a Waterstop may be Installed with Details and Materials Approved by the Engineer.

Surface seal shall be required as shown.

Surface Seal may be waived for Concrete mix design in accordance with Art. 709.05(e)

Install 150 diameter perforated pipe for barrier wall in cut section as shown.

Install barrier delineators as shown.

DESIGN DATA

ALLOWABLE DESIGN STRESSES:

Class "A" Concrete	F'c = 24 MPa
Reinforcing Steel	Fy = 420 MPa
Allowable Bearing Pressure for In-Situ Soil (See Geotechnical Report)	= 239.4 kPa (5000 psf)

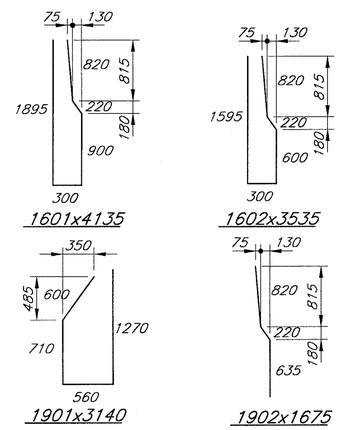
LIVE LOAD:

610mm (Two foot) surcharge as equivalent HS20-44 loading and 44.5kN(10kip) Transverse Load in accordance with 1996 A.A.S.H.T.O Specifications and subsequent Interim Specifications.

EARTH PRESSURE: (assumed values)

Soil Unit Weight:	18,850 N/m3 (120 lbs / ft3)
Cohesionless Soil Angle of Internal Friction (phi):	30 °

BAR BENDING DETAILS



All Dimensions in Millimeters (mm) unless otherwise noted

SEEDING SPECIFICATIONS:

1.) Shall be in Accordance with Section 621 of the Current Indiana Department of Transportation Standard Specifications.

RECOMMENDED EROSION CONTROL MEASURES:

1.) Shall be in Accordance with Section 205 of the Current Indiana Department of Transportation & Typical Standard Sheets.

2.) Topsoil Salvage and Utilization: Removal of Topsoil from all areas to be Excavated or Filled. Topsoil should be stored at a location where it will not interfere with construction operations. The use of a Perimeter Erosion Control Method shall be required and as directed by the project Engineer. Any excess excavation shall be disposed of outside of the R/W as directed in section 203.10 & 202

3.) Surface Roughening: All Slopes which are graded & not immediately stabilized with other erosion control measures shall be roughened as described in section 203.09 until permanent Erosion Control Measures are placed.

4.) Tree Conservation/Protection: As per Section 201.02 the Contractor shall, at the direction of the Engineer, endeavor to save and protect any vegetation which does not impair construction of improvements as designed.

5.) Maintenance Schedule: Maintenance of all erosion control practices should be done as needed on a weekly basis and after all large storms. A construction supervisor should be assigned the task of seeing that all practices are maintained according to the design criteria. and as described in section 205.08.

SOIL EROSION CONTROL SUMMARY:

1.) Contractor shall install all erosion control methods as shown.

2.) Grade the site (sides of swale, mounds and ponds to be seeded and mulched immediately upon completion). Disturbed areas should be kept to a minimum at all times.

3.) Contractor shall control soil accumulation on all streets surrounding project by installing stone surface at all locations where construction traffic leaves the site. Dust shall be kept to a minimum as described in section 107.08(b).

4.) Maintain all filters and traps during construction to prevent any blockages from accumulated sediment. Additional seeding and straw bales may be required during construction as specified by the Engineer or Soil Conservation Service.

SEEDING SPECIFICATIONS:

1.) Shall be in Accordance with Section 621 of the Current Indiana Department of Transportation Standard Specifications.

RECOMMENDED EROSION CONTROL MEASURES:

1.) Shall be in Accordance with Section 205 of the Current Indiana Department of Transportation & Typical Standard Sheets.

2.) Topsoil Salvage and Utilization: Removal of Topsoil from all areas to be Excavated or Filled. Topsoil should be stored at a location where it will not interfere with construction operations. The use of a Perimeter Erosion Control Method shall be required and as directed by the project Engineer. Any excess excavation shall be disposed of outside of the R/W as directed in section 203.10 & 202

3.) Surface Roughening: All Slopes which are graded & not immediately stabilized with other erosion control measures shall be roughened as described in section 203.09 until permanent Erosion Control Measures are placed.

4.) Tree Conservation/Protection: As per Section 201.02 the Contractor shall, at the direction of the Engineer, endeavor to save and protect any vegetation which does not impair construction of improvements as designed.

5.) Maintenance Schedule: Maintenance of all erosion control practices should be done as needed on a weekly basis and after all large storms. A construction supervisor should be assigned the task of seeing that all practices are maintained according to the design criteria. and as described in section 205.08.

SOIL EROSION CONTROL SUMMARY:

1.) Contractor shall install all erosion control methods as shown.

2.) Grade the site (sides of swale, mounds and ponds to be seeded and mulched immediately upon completion). Disturbed areas should be kept to a minimum at all times.

3.) Contractor shall control soil accumulation on all streets surrounding project by installing stone surface at all locations where construction traffic leaves the site. Dust shall be kept to a minimum as described in section 107.08(b).

4.) Maintain all filters and traps during construction to prevent any blockages from accumulated sediment. Additional seeding and straw bales may be required during construction as specified by the Engineer or Soil Conservation Service.

LEGEND

Road Construction	Channelizing Devices	Riprap Ditch
Temporary HMA Widening	Indicates Traffic Flow	Riprap Ditch Check
Bridge Construction	Temporary Concrete Barrier	Culvert Protection

Drop Inlet Protection
Silt Fence
Sediment Trap
Side Ditch Protection
